

Cyrtolobus rufulus Woodruff

FEMALE Length: 5 mm

MALE Length: 4 mm

Regional distribution:

eastern & central US;
eastern Canada

Seasonal distribution in FL:

12 March-8 July; most
specimens collected March-
early May

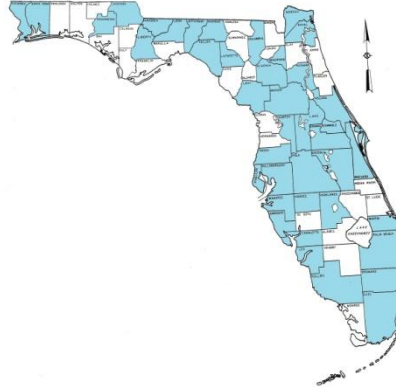

Host associations in FL:

Quercus spp. (primarily *Q.*
virginiana)

Relative abundance in FL:

common

NOTE: Woodruff (1924)
described two forms of *C.*
rufulus. Most of the Florida
specimens match the one that
is not the type form. I believe
there needs to be further
studies to determine if both
forms represent the same
species.

female on *Quercus virginiana*

females

males
